Q: Additional comments

- 1 I just didn't like the course material, was kind of boring. Going through example problems was better.
- 2 Megan was extremely supportive and clear in describing all materials. She did a great job breaking down large volumes of material into lists and steps. I honestly feel that her direction has been a huge part of how I've been able to understand and succeed with content in this class.
- 3 You were such a help in navigating this course and answering all my questions. Thank you!
- 4 Love love love Megan! She is the reason I passed this course! She is so approachable, sweet, and unbelievably talented at explaining topics which the professor made so complicated and making them seem so simple. So grateful to have had her as a TA!
- 5 Megan was one of the best TAs I have had here at the university, and this at after 6 semesters here. She is very knowledgeable and was honestly better than the lecture. I went to every discussion because it was basically the only way I learned in this class. Her office hours were also great because she was very helpful and made me feel better about not understanding something. She's a 10/10!
- 6 Really good TA, was really good about explaining things and telling us what we needed to actually know since lectures were really content heavy
