Q: Additional comments

- 1 Megan was great. She was incredibly nice and was there to help you with any questions you may have.
- 2 Great for questions. TA section was literally the only thing that got me through the class as it was a nicely outlined condensed drill down of concepts. Wished that we could go over exam answers in section though or that they would be posted.
- 3 The TA taught well, provided enough visuals to help us understand, and was approachable and knowledgeable if we had any questions.
- 4 Megan was very good at her job, I think the R program part of the class is pointless because we are never tested or given homework on it so we shouldn't be learning it in lab at all. My only problem with Megan was she said in discussion that the professor wouldn't put this problem on an exam and he did just that. It wasn't worth many points though.
